

Document & Invoice Analyzer

SAAS DEVELOPMENT ROADMAP

Phase 1 — Foundation

- FastAPI backend
- Settings/configuration
- Testing setup
- Project structure
- Basic health/readiness
- Code quality

Phase 2 — Document Management

Status Update: Current phase is essentially complete; invoice extraction is the next intelligence layer.

- PostgreSQL/SQLAlchemy
- Upload
- List
- Delete
- Redis queue
- PDF text extraction
- Document model
- Local storage
- Details
- Document lifecycle
- Worker foundation
- Extracted-text persistence

Phase 3 — Invoice Intelligence ⌚

Yahan software actually useful hona start hoga.

Initially local rule-based extraction, paid API ke baghair.

- Invoice number
- Vendor
- Currency
- Tax
- Later line items
- Invoice date
- Customer
- Subtotal
- Total
- Confidence/validation

Phase 4 — OCR ⌚

Scanned PDFs aur images ke liye:

- Image processing
- Scanned PDF support
- OCR failure handling
- OCR
- OCR text persistence

Phase 5 — Processing Pipeline ⌚

Complete automated pipeline:

Yahan worker genuinely end-to-end kaam karega.

Upload → Queue → Worker → Detect type → Extract/OCR → Analyze → Validate → Complete/Failed

Phase 6 — Professional Frontend/UI

Ye woh phase hai jiske start hone par main tumhein specifically bataunga.

- Professional dashboard
- Document table
- Document viewer
- Invoice results
- Loading states
- Professional SaaS UX
- Drag & drop upload
- Processing indicators
- Extracted text
- Error states
- Responsive design

Phase 7 — User & Security

- Authentication
- Document ownership
- Secure file access
- User accounts
- Authorization
- Input/security hardening

Phase 8 — Export & Productivity

- JSON export
- PDF report
- Filters
- Bulk operations
- CSV/Excel
- Search
- Sorting

Phase 9 — Testing & Production Hardening

- Integration tests
- Security testing
- Database migration verification
- Logging
- End-to-end tests
- Performance testing
- Error monitoring
- Configuration hardening

Phase 10 — Deployment & Productization

- Docker
- Redis
- CI/CD
- Documentation
- Production PostgreSQL
- Object/file storage
- Deployment
- Production configuration
